# Medical Support

Professional experienced medical care at the time of injury anywhere in the field.

Every project aims for zero harm, but accidents do happen. When they do, early access to treatment and management reduces deterioration, increases survivability and promotes a speedier recovery.

Clinicians Trained to Suit Your Project

### Training

All our Clinicians have a complete set of GWO qualifications allowing them to climb any asset in the field, this means they can carry out treatment on location and assist with any rescues. In addition we provide our clinicians with full STCW training allowing them to act as vessel crew.

Pre-written tool-box talks ensure vessel crew and PAX alike are all briefed to support the Paramedic in making a prompt response to an incident.

Where required our Clinicians have IRATA Rope Access & Confined Spaces training.

#### Additional Training:

- IRATA Rope Access
- Confined Spaces
- Banksman / Slinger

### Reporting

We operate a modern digital system which allows us to monitor all treatment and determine any trends that are occurring. We provide these reports as part of our service and they can be adapted to suit your requirements.

### Equipment

On deployment each clinician has a full array of equipment at their disposal, the kit has been put together to provide the clinician with the required resources to treat, manage and care for any conceivable scenario. Equipment is stored in cases and bags complete with a dedicated lift bag to ensure a rapid unhindered response.

Equipment carried can be adapted to site requirements.

Our Clinicians carry the same level of equipment that you would find on a frontline ambulance.

### Control

We have a robust system in place allowing us to monitor all equipment and medication ensuring that everything is compliant and in date.

Weekly, shift change, and monthly checks are carried out and recorded digitally.

### Governance

Clinical governance is defined as "A framework through which NHS organisations are accountable for continuously improving the quality of their services and safe-guarding high standards of care by creating an environment in which excellence in clinical care will flourish." It's often thought of in terms of the seven pillars of clinical governance – clinical effectiveness, risk management, patient experience and involvement, communication, resource effectiveness, strategic effectiveness, and learning effectiveness.

We ensure we are doing the right thing, at the right time, by the right person, in the way the patient wishes, by an appropriately trained and resourced individual or team. But that's not all – that individual or team must work within an organisation that is accountable for the actions of its staff, values its staff (appraises and develops them), minimises risks, and learns from good practice, and indeed mistakes.

## Frequently Asked Questions

Space is tight on board, we can't lose seats to non-technical passengers

*Along with holding GWO qualifications to access turbines, our team have MCA STCW qualifications allowing them to act as deck crew on vessels.*

*If preferred our Paramedics can sail in a crew seat depending on the vessel's capacities taking up a crew seat rather than a PAX seat.*

*This can be beneficial to reduce seating usage and can reduce cost.*

How do you maintain operational readiness?

*Our team complete thorough checks of equipment and drugs under their control. Checks and tests are evidenced and logged electronically.*

*Once kit is charged, checked and operationally ready everything is closed and sealed with coded tamper tags.*

How do you ensure your Paramedics remain current with best practices and able to deliver the best possible care?

*A condition of a clinician's registration with the HCPC means they have to maintain an auditable portfolio of training and practice to evidence their continual education, to satisfy the HCPC of their competence. The HCPC randomly audit portfolios to ensure compliance. This also provides our clients with reassurance that the staff we deploy to your project are capable when called in to action.*

*The title Paramedic is a protected state registered title much like Doctor. Using the title without being qualified and not holding a Health Care Professional Council registration number is illegal.*

## Support by Numbers

Our medics have provided over **30,000**

hours of offshore renewable medical cover this year

By providing treatment in field our medics have saved **£834,000**

by keeping people working

Using our paramedics has resulted in

**73%**

of cases returning to work and not going back to shore
